

ABSTRACT

A static gasket adapted to seal a joint between a first member and a second member, the joint having a clamp load applied to the first and second members. The gasket including a carrier member having a first side and an opposite side. An elastomeric member is on the carrier member. The elastomeric member has a tab portion and a sealing portion on the first side and an adhesive layer is on the opposite side. Thus, the carrier adheres to one of the first and second members to ease the assembly of one of the first member and second members to each other and the carrier member is conformable to improve the seal between the seal between the first member and the second member.
